- Reference

- CSD is an electrical silent wave.
- CSD will impair some cortical activities.
- CSD is strongly correlated with a number of neurological disorders.
- Potassium (K^+) is the most important ion in CSD.

The Formula in CSD Model

Fick's Law:

$$\frac{\partial K}{\partial t} = D \nabla^2 K + f(K)$$

$$f(K) = A(K - K_r)(K - K_\theta)(K - K_m)(K + 0.1) - rK$$

$$\frac{\partial r}{\partial t} = B((K - K_r) - Cr)$$

Finite Difference Method

$$\begin{pmatrix} 0 & \frac{1}{\Delta y^2} & 0 \\ \frac{1}{\Delta x^2} & -\frac{2}{\Delta x^2} - \frac{2}{\Delta y^2} & \frac{1}{\Delta x^2} \\ 0 & \frac{1}{\Delta y^2} & 0 \end{pmatrix}$$

Convolution

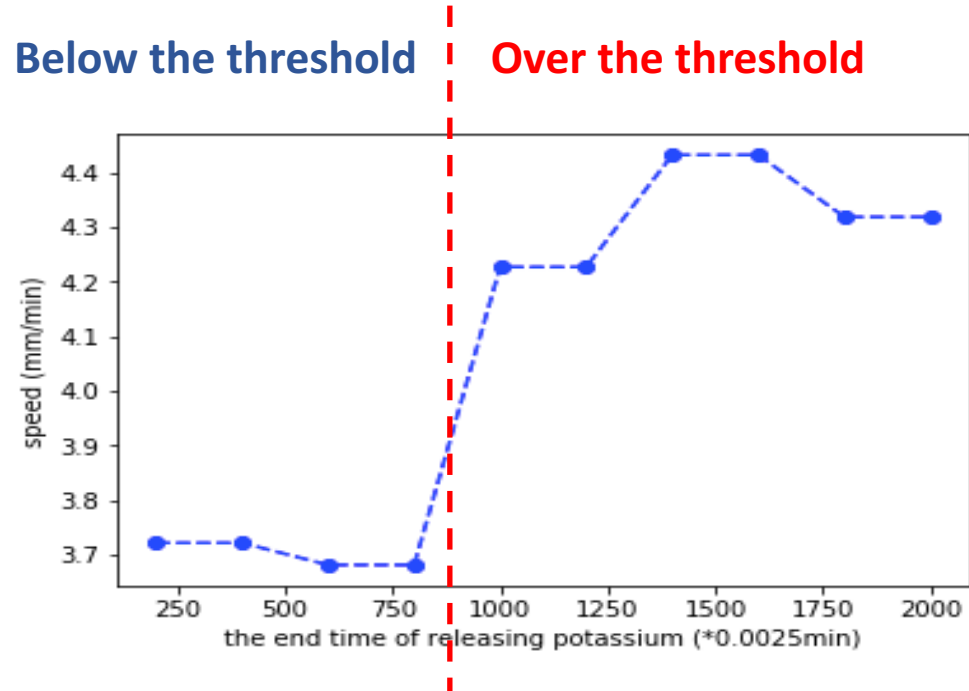

Method Condition

- Take $50 \times 50 \times 50$ mesh cube to simulate CSD.
- Each grid cell in mesh cube is $0.025\text{mm} \times 0.025\text{mm} \times 0.025\text{mm}$.
- Each time step is 0.00025 min. and time interval is 0~0.5 min.

Results

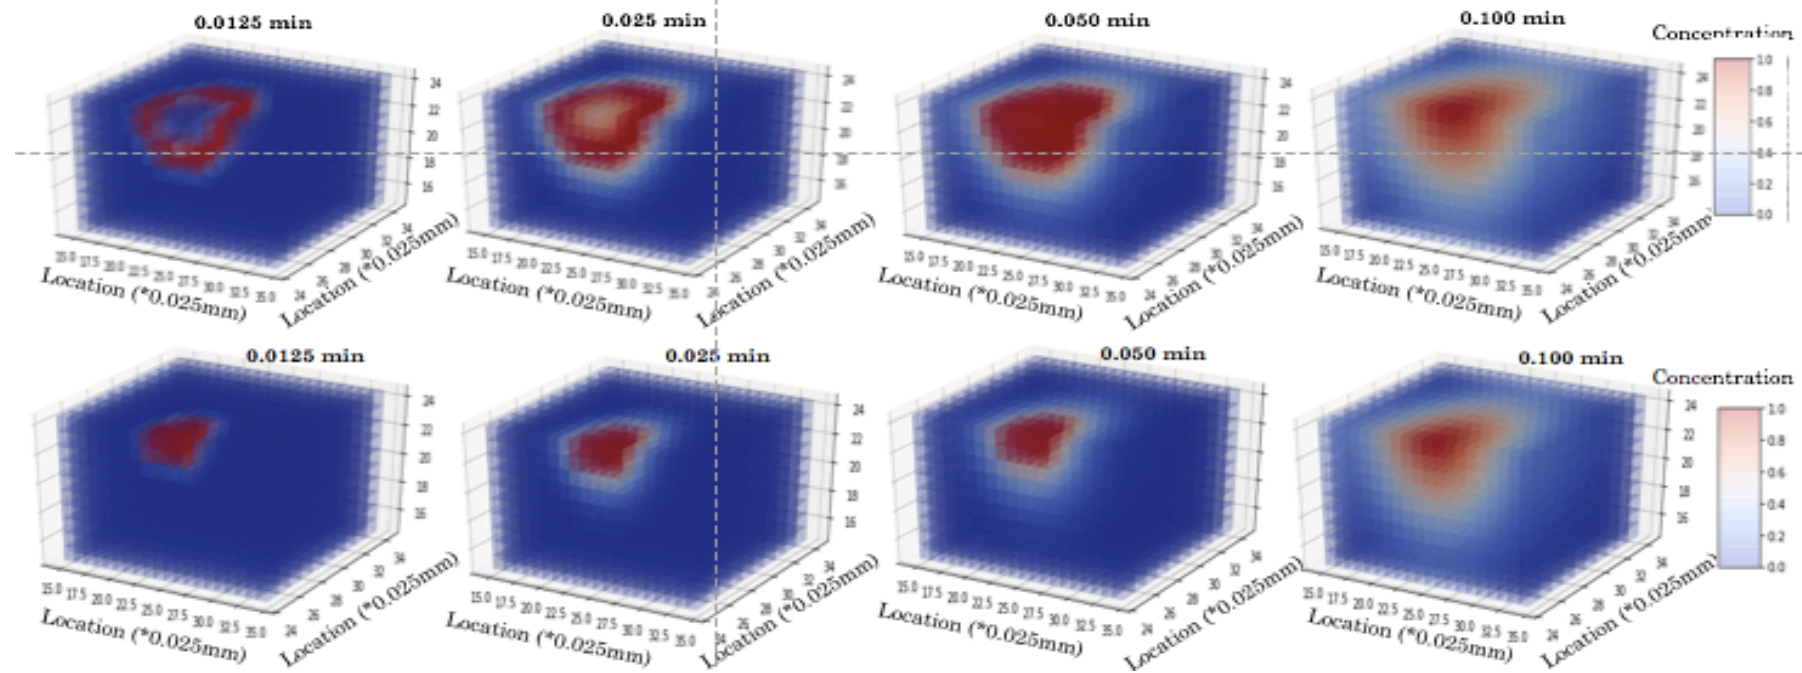

The speed of diffusion wave
vs.
The time of releasing potassium

The speed of diffusion wave
vs.
Different shape of releasing potassium

Results

Write IBM's Neural Tissue Simulator (NTS) Code
